The global Programmable Logic Controller (PLC) market size is expected to reach \$ 24300 million by 2032, rising at a market growth of 4.7% CAGR during the forecast period (2026-2032).

A programmable logic controller, PLC, is a digital computer used for automation of typically industrial electromechanical processes, such as control of machinery on factory assembly lines, amusement rides, or light fixtures. PLCs are used in many machines, in many industries. PLCs are designed for multiple arrangements of digital and analog inputs and outputs, extended temperature ranges, immunity to electrical noise, and resistance to vibration and impact. Programs to control machine operation are typically stored in battery-backed-up or non-volatile memory. A PLC is an example of a 'hard' real-time system since output results must be produced in response to input conditions within a limited time, otherwise unintended operation will result.

The core manufacturers of Programmable Logic Controller (PLC) in the world include Siemens, Rockwell (A-B), and Mitsubishi. The first three companies account for about 64% of the share. Asia-Pacific is the largest market with nearly 38% of the market, followed by Europe and North America with 32% and 23% respectively. In terms of product type, Micro is the largest segment, accounting for about 37% of the share, while in terms of application, Automobile Industry is the largest downstream segment, accounting for about 48%.
