Abstracts

According to our (Global Info Research) latest study, the global Programmable Logic Controller (PLC) market size was valued at USD 13960 million in 2023 and is forecast to a readjusted size of USD 19780 million by 2030 with a CAGR of 5.1% during review period.

A programmable logic controller, PLC, is a digital computer used for automation of typically industrial electromechanical processes, such as control of machinery on factory assembly lines, amusement rides, or light fixtures. PLCs are used in many machines, in many industries. PLCs are designed for multiple arrangements of digital and analog inputs and outputs, extended temperature ranges, immunity to electrical noise, and resistance to vibration and impact. Programs to control machine operation are typically stored in battery-backed-up or non-volatile memory. A PLC is an example of a 'hard' real-time system since output results must be produced in response to input conditions within a limited time, otherwise unintended operation will result.

Global key players of programmable logic controller (PLC) include Siemens, Rockwell (A-B), Mitsubishi, etc. Top three players occupy for a share about 63%. Europe is the largest producer, holds a share around 35%, followed by North America and Japan, both holding a share about 24 percent. Asia-Pacific is the largest market, with a share about 37%, followed by Europe and North America, with share 34% and 23%, separately.
