Abstracts

Programmable logic devices are semiconductor logic blocks which have applications for developing reconfigurable circuits. Programmable logic devices has the capability to be reprogrammed multiple times, which in turn benefits the end-users at the time of producing new advanced circuitry on a trial and error basis. Reprogramming is possible for the programmable logic devices as a result of these devices being primarily dependent on re-writable memory technology through which a better flexibility is provided by changing the design along with making this process of reprogramming easier.
