## Abstracts

According to our (Global Info Research) latest study, the global Projection Anti-light Curtain market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The projection anti-light curtain is a special curtain used to improve the picture quality of the projector. The principle of the anti-light curtain is mainly to achieve light resistance through optical coatings and physical structures. It can absorb ambient light and control the incident light of the projector to reflect to the viewing angle area where the human eye is, so as to reduce the projection light scattered into the space. In this way, the utilization efficiency of light energy will be greatly improved, the eyes will receive more projected light, and the interfering ambient light will be reduced, thereby improving image attributes such as color, brightness, and contrast.
