## Abstracts

According to our (Global Info Research) latest study, the global Projector for Volumetric Display market size was valued at USD 193.4 million in 2023 and is forecast to a readjusted size of USD 238.9 million by 2030 with a CAGR of 3.1% during review period.

A Projector for volumetric display is defined as equipment which helps in generation and scattering of visible radiation from a set of localized and particular regions within a three-dimensional space. It includes visual display devices that form a visual representation of a three-dimensional object. These techniques work on a combination of prominent components. It creates 3D imagery via the emission scattering or relaying of illumination from well-defined regions in space. These displays are auto-stereoscopic and generate 3D imagery which can be seen with the naked eye. It is a promising technology which is widely applicable in the automotive, aerospace, defence, medical and industrial sector.

An increase in demand for advanced medical imaging devices is a major factor driving the market. In addition, technological enhancements in 3D displays and increased application of LED & LCD technology further stimulates the demand for such systems. However, the need for advanced software and electronic components may obstruct the growth of the market. Nevertheless, prospective growth opportunities found in telemedicine and surgery may boost the market in forthcoming years. Lack of technological knowledge is the main challenge for this market.
