According to our (Global Info Research) latest study, the global Proleukin market size was valued at USD 163.2 million in 2023 and is forecast to a readjusted size of USD 206.9 million by 2030 with a CAGR of 3.4% during review period.

Proleukin, a lymphokine, is produced by recombinant DNA technology using a genetically engineered E. coli strain containing an analog of the human interleukin-2 gene.

The Aldesleukin market analysis reveals a niche segment in immunotherapy for cancer treatment. Aldesleukin, also known as Interleukin-2 (IL-2), is a recombinant cytokine that stimulates the immune system to target cancer cells. Its FDA approval for metastatic melanoma and renal cell carcinoma has driven market growth. Aldesleukin's mechanism of action and potential for durable responses attract interest from oncologists. However, its limited efficacy in certain patient populations and significant side effects pose challenges. The market is competitive, with other immunotherapies emerging. Despite challenges, Aldesleukin offers potential for further development, especially in combination therapies, as researchers explore its benefits for other cancer types and treatment settings.
