According to our (Global Info Research) latest study, the global Propane Gas Burner market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Propane gas burners are devices that utilize propane gas as fuel, reaching flame temperatures between 2,732 °F and 3,632 °F. These burners are capable of processing materials such as metal and asphalt due to their high heat output, which also allows for rapid heating of objects.

Their compact and portable design makes them ideal for both outdoor activities and various industrial processes. Propane combustion is relatively clean, producing minimal impurities and not affecting food taste or process quality. However, indoor use requires adequate ventilation to prevent carbon dioxide buildup.
