Abstracts

The global Propellant Cosmetic Chemicals market size is expected to reach \$ 119.3 million by 2029, rising at a market growth of 5.1% CAGR during the forecast period (2023-2029).

As consumers continue to pay more attention to the safety and environmental protection of cosmetics, Propellant Cosmetic Chemicals will also be safer and more environmentally friendly. For example, some cosmetics companies have begun using biodegradable propellants to reduce their impact on the environment.

Propellant Cosmetic Chemicals are chemicals that play a propulsive role in cosmetics, usually in the form of gases or liquids. These propellants are compressed into a liquid state, and when they are sprayed out using a nozzle or other tool, they will quickly evaporate into a gaseous state, while the liquid remains in a liquid state and stays on the items that need to be sprayed, such as skin, hair, etc.
