The global Propeller Tunnel Thruster market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The propeller tunnel thruster is a vital component in enhancing a vessel's maneuverability and control. It plays a crucial role in enabling vessels to navigate safely in tight spaces, improving docking procedures, and enhancing the overall operational efficiency of different types of ships and boats.

A 'Propeller Tunnel Thruster' is a marine propulsion device used on various types of vessels to provide auxiliary thrust and maneuverability. It consists of a propeller mounted within a tunnel-like structure in the hull of a ship or boat. This design allows the propeller to generate thrust in a direction perpendicular to the vessel's main propulsion system, aiding in navigation, docking, and precise maneuvering in tight spaces.
