According to our (Global Info Research) latest study, the global Propulsion Systems market size was valued at USD 253000 million in 2023 and is forecast to a readjusted size of USD 324880 million by 2030 with a CAGR of 3.6% during review period.

A propulsion system generally consists of an aircraft engine and some means to generate thrust, such as a propeller or a propulsive nozzle. A propulsion system must achieve two things. First, the thrust from the propulsion system must balance the drag of the airplane when the airplane is cruising. And second, the thrust from the propulsion system must exceed the drag of the airplane for the airplane to accelerate. In fact, the greater the difference between the thrust and the drag, called the excess thrust, the faster the airplane will accelerate.

Regionally, North America is the biggest Consumption area of Flight Propulsion Systems in the world and china is the most potential market with the fastest growing rate of 9.48%
