## Abstracts

The global Propylene Glycol Monoethyl Ether market size is expected to reach \$ 59.53 million by 2032, rising at a market growth of 4.7% CAGR during the forecast period (2026-2032).

Propylene Glycol Monoethyl Ether is a niche solvent within the propylene glycol ether family, and is commercially supplied mainly in the form of 1-Ethoxy-2-propanol, which represents the principal product form in the Ethoxy Propanol market. The product features good solvency, moderate evaporation characteristics, and favorable compatibility in both water-based and organic systems, and is mainly used as a solvent or co-solvent in coatings, inks, adhesives, industrial cleaners, and selected electronic chemical formulations. Its upstream raw materials mainly include propylene oxide, ethanol, catalysts, and related utilities, while its downstream customers mainly consist of coatings and ink manufacturers, industrial and precision cleaner producers, adhesive and specialty chemical formulators, as well as certain electronic chemical companies. Based on the currently verifiable global supply landscape and the market positioning of this product within the glycol ether segment, global nominal capacity for Propylene Glycol Monoethyl Ether in 2025 is estimated at approximately 30,000 tons, with sales of about 20,300 tons, an average ex-works price of around USD 2,050 per ton, and an industry gross margin in the range of 13%-20%. Overall, Propylene Glycol Monoethyl Ether is not a bulk commodity solvent, but rather a relatively concentrated specialty solvent segment characterized by more professional downstream applications and pricing above that of conventional basic glycol ethers.

This report studies the global Propylene Glycol Monoethyl Ether production, demand, key manufacturers, and key regions.
