Abstracts

The global Prostaglandin market size is expected to reach \$ 965 million by 2032, rising at a market growth of 6.9% CAGR during the forecast period (2026-2032).

Prostaglandins are autocrank derived from arachidonic acid. They both sustain homeostatic functions and mediate pathogenic mechanisms, including the inflammatory response. Prostaglandins control several processes in the body, especially as it relates to the healing process. When tissue is damaged or infected, this group of hormones will create the reactions that cause pain, fever and inflammation, which sparks the healing process. Prostaglandins also stimulate the formation of a blood clot and the contraction of the blood vessel wall when body is bleeding. Once blood clots are no longer needed and the injury begins to heal, another prostaglandin will stimulate the changes that allow the clots to dissipate and the blood vessel wall to relax.

Europe is the largest consumption place, with a consumption market share nearly 35% in 2019. Following Europe, North America is the second largest consumption place with the consumption market share of about 27%.

CEPIA, Johnson Matthey and Pfizer are the main manufacturers of prostaglandin, they take about 65% of the whole market.

This report studies the global Prostaglandin production, demand, key manufacturers, and key regions.
