## Abstracts

According to our (Global Info Research) latest study, the global Prosthetic Liners market size was valued at USD 548.4 million in 2023 and is forecast to a readjusted size of USD 713.4 million by 2030 with a CAGR of 3.8% during review period.

The prosthetic liner acts as a sort of 'second skin' between the movable soft tissue of the residual limb (muscles, tissue, skin) and the hard shell of the socket. This reduces movement and friction between the skin and prosthetic socket and therefore reduces the forces in the socket described earlier. The prosthetic liner connects your residual limb to the prosthetic, cushioning the sensitive skin on the residual limb and thereby alleviating problems such as pressure points.
