According to our (Global Info Research) latest study, the global Protective Coating Resins market size was valued at USD 17000 million in 2023 and is forecast to a readjusted size of USD 19800 million by 2030 with a CAGR of 2.2% during review period.

Protective coating resins are predominantly used to achieve corrosion control, temperature resistance, chemical resistance, hardness, and toughness in harsh environments. As such, protective coatings are applied to a surface to ensure protection from external environment, which can otherwise damage the function or integrity of an item or part. Protective coatings find applications in consumer products as well as in the heavy machinery, marine, automotive, and oil and gas industries.

North America accounted for the second-largest market share in 2017. China is the largest producer of protective coating resins worldwide with the presence of manufacturing facilities of major industry players in the country. Most of the big players in the protective coatings market are backward integrated and have the competitive advantage over other manufacturers. The threat of new entrants in the market in China, India, and other Asia-Pacific countries is high due to low cost of raw material and labor.
