Abstracts

A device that senses the quantity of current flowing in the supply lines before entering the power system of the equipment or motor can prevent the motor from damage. A relay is one such electromechanical device that is actuated by electrical current. In a relay, the current flowing in one circuit causes the opening and closing of another circuit. Due to the simplicity, long life, and proven reliability, relays find extensive use in many applications, including digital computers, automation systems, and telephone exchanges.

Scope of the Report:

This report focuses on the Protective Relay in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Asia-Pacific is estimated to hold the largest market share, followed by North America and Europe.
