Abstracts

According to our (Global Info Research) latest study, the global Protein Biochip market size was valued at USD 149.2 million in 2023 and is forecast to a readjusted size of USD 213.7 million by 2030 with a CAGR of 5.3% during review period.

Protein Biochip is a small Protein array used to quickly detect a large number of unknown proteins. It works in a similar way to a DNA chip. First, a large number of known proteins (such as monoclonal antibodies) are placed on a small substrate and then exposed to and reacted with the unknown protein sample. Due to the specific binding between the antigen and the antibody, it can finally be detected by means of laser.

Following a strong growth of 26.2 percent in the year 2021, WSTS revised it down to a single digit growth for the worldwide semiconductor market in 2022 with a total size of US\$580 billion, up 4.4 percent. WSTS lowered growth estimation as inflation rises and end markets seeing weaker demand, especially those exposed to consumer spending. While some major categories are still double-digit year-over-year growth in 2022, led by Analog with 20.8 percent, Sensors with 16.3 percent, and Logic with 14.5 percent growth. Memory declined with 12.6 percent year over year. In 2022, all geographical regions showed double-digit growth except Asia Pacific. The largest region, Asia Pacific, declined 2.0 percent. Sales in the Americas were US\$142.1 billion, up 17.0% year-on-year, sales in Europe were US\$53.8 billion, up 12.6% year-on-year, and sales in Japan were US\$48.1 billion, up 10.0% year-on-year. However, sales in the largest Asia-Pacific region were US\$336.2 billion, down 2.0% year-on-year.
