Abstracts

Protein detection, quantitation, and analysis are central to investigating a wide variety of biological processes. Measuring the protein concentration is necessary to processes ranging from protein purification and labeling to sample preparation for electrophoresis.

Protein quantification is the measurement of the total protein concentration in a sample. Protein can be quantitated directly via absorbance at 280 nm or indirectly using colorimetric (BCA, Bradford, etc.), or fluorometric methods offering advantages, such as greater sensitivity. To identify and measure a specific protein within a complex sample, for example, serum or cell lysate, an enzyme-linked immunosorbent assay (ELISA) may be used.
