## Abstracts

According to our (Global Info Research) latest study, the global Protein Electrophoresis Buffer market size was valued at US\$ 262 million in 2024 and is forecast to a readjusted size of USD 366 million by 2031 with a CAGR of 4.9% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

SDS can bind to proteins and make the protein-SDS complex carry a large amount of negative charge. At this time, the charge of the protein itself is completely covered by SDS, eliminating the difference in the charge of various proteins. SDS can also break the hydrogen bonds within and between molecules, destroy the secondary and tertiary structures of protein molecules, and DTT can break the disulfide bonds between cysteine residues, destroy the spatial structure of proteins, and eliminate the differences between protein structures. Therefore, the electrophoresis speed is only related to its molecular weight. Bromophenol blue is used as an indicator during electrophoresis, which can roughly indicate the time when electrophoresis ends.

This report is a detailed and comprehensive analysis for global Protein Electrophoresis Buffer market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application.
