According to our (Global Info Research) latest study, the global Protein Electrophoresis Reagents market size was valued at US\$ 262 million in 2024 and is forecast to a readjusted size of USD 366 million by 2031 with a CAGR of 4.9% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Protein electrophoresis reagents are a type of experimental chemicals used to separate, detect and analyze proteins. They are commonly used in electrophoresis techniques such as SDS-PAGE and are widely used in life science research, molecular biology and clinical diagnosis. The main reagents include acrylamide, SDS, loading buffer, electrophoresis buffer, staining solution and molecular weight standards. Reagent combinations with different functions are used in various links such as protein preparation, separation and color development.

Current development trends include: the use of more sensitive fluorescent dyes, the popularization of ready-to-use reagents and precast gels, the automated integration of experimental systems, and the promotion of green and environmentally friendly reagents. The price of conventional protein electrophoresis reagents ranges from tens to hundreds of yuan, depending on the specifications and brand. The overall direction tends to be efficient, safe and intelligent.
