## Abstracts

The global Protein Electrophoresis Tank market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Protein electrophoresis tank is an experimental instrument used to separate and analyze proteins. The principle of the protein electrophoresis tank is based on the different migration speeds of proteins in the electric field. By applying a voltage, the protein sample is loaded into the gel and then moves in the electric field. Different proteins move through the gel at different speeds and separate into different bands, depending on their size and charge. These bands can be further used for quantitative analysis, protein purification or identification.

This report studies the global Protein Electrophoresis Tank production, demand, key manufacturers, and key regions.
