According to our (Global Info Research) latest study, the global Protein Purification Agarose Bead market size was valued at US\$ 728 million in 2024 and is forecast to a readjusted size of USD 1079 million by 2031 with a CAGR of 5.9% during review period.

Purifying a target protein is an important step before investigating its structure and function. To purify a target protein from a mixture of substances, column chromatography is a useful technique due to its convenience and cost. Agarose resins or agarose beads are matrix, which are composed of agarose and used in column chromatography.

The global pharmaceutical market is 1475 billion USD in 2022, growing at a CAGR of 5% during the next six years. The pharmaceutical market includes chemical drugs and biological drugs. For biologics is expected to 381 billion USD in 2022. In comparison, the chemical drug market is estimated to increase from 1005 billion in 2018 to 1094 billion U.S. dollars in 2022. The pharmaceutical market factors such as increasing demand for healthcare, technological advancements, and the rising prevalence of chronic diseases, increase in funding from private & government organizations for development of pharmaceutical manufacturing segments and rise in R&D activities for drugs.
