The global Protein Purification and Isolation Hardware market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The global protein purification and isolation hardware market was valued at USD 8.44 billion in 2022 and is expected to grow at a compound annual growth rate (CAGR) of 10.86% from 2023 to 2029. Growing research in the areas of pharmaceutical and biotechnology for the development of novel drugs drives the demand for protein purification and isolation. Furthermore, rising investments in R&D by pharmaceutical manufacturers are projected to drive market growth.

Purification and isolation of proteins refer to a set of procedures for isolating a specific protein from a complicated combination of cells, organisms, or tissues. Protein research requires these techniques to separate, concentrate, stabilize, and eliminate contaminants including endotoxins, viruses, and nucleic acid. They involve determining material and maintaining a purification table to track the enzyme's development. They are mostly used to classify a protein's function, structure, and interactions. Affinity chromatography, immunoprecipitation, proteomics, and enzyme assay are some of the regularly utilized methods of protein purification and separation. This report focus on Protein Purification and Isolation Hardware market.
