## Abstracts

According to our (Global Info Research) latest study, the global Protein Sequencing Service market size was valued at US\$ 117 million in 2025 and is forecast to a readjusted size of US\$ 177 million by 2032 with a CAGR of 6.0% during review period.

Protein Sequencing Service refers to a professional analytical service that uses biochemical or mass spectrometry techniques to determine the amino acid sequence of a protein. Currently, mainstream technical approaches include de novo sequencing based on mass spectrometry, which derives sequences by analyzing peptide fragmentation maps and is suitable for identifying unknown proteins, antibody drugs, and post-translational modification sites; and the classic Edman degradation method, which degrades amino acids one by one from the N-terminus, suitable for verifying the N-terminal sequence of high-purity proteins. This service aims to address the needs for identifying unknown proteins, confirming recombinant protein sequences, locating modification sites, and resolving antibody variable regions. It is widely used in biopharmaceutical quality control, structural biology research, and molecular diagnostic reagent development, serving as a core tool connecting protein structure and function.

The global Protein Sequencing Service market exhibits a differentiated pattern: North America leads in technology, Europe focuses on mass spectrometry, and the Asia-Pacific region is experiencing rapid growth. The United States, relying on top mass spectrometry instrument manufacturers and biopharmaceutical giants, dominates the high-sensitivity de novo sequencing and post-translational modification analysis market, mastering core algorithms and database standards. Europe, with its deep-rooted structural biology tradition and rigorous regulatory system, has set quality benchmarks in Edman degradation and high-precision modification localization services, focusing on

challenging samples and GMP-level verification. The Asia-Pacific region, with China at its core, is driven by massive research demand, vigorously developing cost-effective shotgun identification and quantification services, gradually upgrading from sample processing to complex antibody sequencing and single-cell proteomics analysis.
