According to our (Global Info Research) latest study, the global Protein Transfer System market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

Protein Transfer System is a device and method used to transfer electrophoretically separated proteins from gels to solid supports such as nitrocellulose membranes or polyvinylidene fluoride (PVDF) membranes. This process is a key step in Western Blot experiments, which aims to transfer proteins from gels to membranes for subsequent antibody detection and protein analysis. The efficiency and accuracy of the transfer system are critical to the quality of the final experimental results.
