The global Prunus Mume Fruit Powder market size is expected to reach \$ 102 million by 2032, rising at a market growth of 6.0% CAGR during the forecast period (2026-2032).

Prunus Mume Fruit Powder is a powder prepared from the dried near-mature fruit of Prunus mume (Sieb.) Sieb. et Zucc. of the Rosaceae family, i.e., the material known in Chinese as Wu-mei. Wu-mei is obtained from near-mature fruits harvested in summer, dried at low temperature, and then kept until the surface turns black.

From an upstream raw-material perspective, the core raw material of mume fructus powder is the near-mature fruit of Prunus mume, and in commercial practice the powder may be based on whole processed fruit, de-cored fruit flesh, concentrated fruit solids, or extract solids derived from the same botanical source. From a downstream perspective, Wu-mei has long been used in both food and traditional herbal systems in China, and official Chinese lists include Wu-mei among substances used as both food and medicine. In modern commercial use, Prunus mume materials are commonly found in beverages, sour plum drinks, candies, preserved products, pickles, liquor, health drinks, herbal formulations, and functional-food style products.

In 2025, global sales of Prunus Mume Fruit Powder reached approximately 890 tons, with an average global market price of around US\$ 75/kg. Production capacity varies significantly among manufacturers, with gross profit margins ranging from approximately 20% to 40%.
