## Abstracts

According to our (Global Info Research) latest study, the global Prussian Blue (White) Compounds market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Prussian blue (white) compounds have high energy density potential and good rate performance. At the same time, the synthesis method is relatively simple and the cost is low. The disadvantage is that the crystal water in its crystals will reduce the actual specific capacity and cycle performance of the material. At present, the actual specific capacity of Prussian blue (white) compounds is between 70-160mAh/g, and the cycle performance is 1000-2000 times.
