Abstracts

The global Prussian Blue (White) Compounds market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Prussian blue (white) compounds have high energy density potential and good rate performance. At the same time, the synthesis method is relatively simple and the cost is low. The disadvantage is that the crystal water in its crystals will reduce the actual specific capacity and cycle performance of the material. At present, the actual specific capacity of Prussian blue (white) compounds is between 70-160mAh/g, and the cycle performance is 1000-2000 times.

This report studies the global Prussian Blue (White) Compounds production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Prussian Blue (White) Compounds, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2023 as the base year.
