Abstracts

According to our (Global Info Research) latest study, the global Pseudo-UTP market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Pseudouridine-5'-O-triphosphate (Pseudo-UTP) is an important modified nucleoside-5'-O-triphosphate. In the chemical structure of pseudouridine triphosphate, ribose is not connected to the N1 of uracil, but to the C5 of the pyrimidine ring. This structure makes pseudouridine triphosphate a special modified nucleoside in RNA molecules.

Pseudouridine triphosphate is one of the basic raw materials for polymerase-mediated RNA molecule synthesis. During RNA synthesis, it can replace uridine triphosphate (UTP) and participate in the extension of RNA chain. By replacing uridine in RNA, pseudouridine can reduce the immunogenicity of mRNA and thus improve its stability. This enhanced stability contributes to the long-term existence and effective expression of mRNA in cells. The introduction of pseudouridine can also optimize the translation efficiency of mRNA, so that the protein it expresses has higher yield and better quality.

In summary, pseudouridine triphosphate is an important modified nucleoside-5'-O-triphosphate, which has broad application prospects in RNA synthesis, mRNA vaccine and drug development, gene therapy, and biological research.
