## Abstracts

The global Psychedelic Mushroom market size is expected to reach \$ 1608.1 million by 2029, rising at a market growth of 9.3% CAGR during the forecast period (2023-2029).

The shift in attitudes towards psychedelic drugs in recent years, particularly in the context of mental health treatment. Researchers have found that certain psychedelic substances, including psilocybin, may be effective in treating conditions such as depression, anxiety, and post-traumatic stress disorder (PTSD). This has led to increased interest and advocacy for the use of these substances in therapeutic settings. Additionally, there is a growing trend towards natural and holistic health practices, which includes the use of natural substances like psilocybin. As people become more conscious of the potential side effects and risks associated with pharmaceutical drugs, they may be turning to alternative treatments like psychedelics.

Psychedelic mushrooms have shown promise in treating a range of mental health conditions, including depression, anxiety, PTSD, and addiction. As more research is conducted on their therapeutic potential, demand for these substances is likely to increase. The main applications of these products include the treatment of depression and anxiety disorders. psilocybin can help alleviate symptoms of depression and anxiety, and can even produce long-lasting positive changes in personality and behavior. This has led to a growing interest in the use of psilocybin as a potential treatment for a range of mental health conditions, including post-traumatic stress disorder (PTSD), addiction, and end-of-life anxiety in patients with terminal illness.
