According to our (Global Info Research) latest study, the global Pt Catalyst market size was valued at US$ 973 million in 2025 and is forecast to a readjusted size of US$ 1239 million by 2032 with a CAGR of 3.6% during review period.

In 2025, the production volume of Pt catalysts reached 5,292 tons, with an average selling price of 178.6 thousand USD per ton. The global annual production capacity of Pt catalysts is approximately 8,000 tons, and the gross profit margin is about 24.6%. A Pt catalyst is a type of material that uses platinum (Pt) as its core active component, capable of significantly altering the rate of a chemical reaction while itself remaining chemically unchanged before and after the reaction. It is typically not composed of pure platinum, but rather consists of nano-scale platinum particles highly dispersed and supported on a high-surface-area carrier (such as alumina, activated carbon, or zeolite) to maximize platinum utilization efficiency. Leveraging the unique electronic structure of platinum, this catalyst exhibits excellent activity and selectivity for various important chemical reactions, including oxidation, hydrogenation, and dehydrogenation. It is widely used in key industrial fields such as automotive exhaust purification, petroleum refining (e.g., catalytic reforming), fuel cells, and chemical synthesis (e.g., nitric acid production). The upstream raw materials for Pt catalysts include platinum group metal ores, catalyst carriers, and additives. The midstream sector consists of Pt catalyst manufacturers, while the downstream sectors primarily include industries such as fine chemicals and silicones.

This report is a detailed and comprehensive analysis for global Pt Catalyst market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application.
