According to our (Global Info Research) latest study, the global Pt-Ru/C Catalyst market size was valued at US\$ 29.53 million in 2025 and is forecast to a readjusted size of US\$ 39.09 million by 2032 with a CAGR of 4.1% during review period.

Platinum-ruthenium-carbon (Pt-Ru/C) catalyst is a high-performance bimetallic electrocatalyst composed of platinum (Pt) and ruthenium (Ru) nanoparticles deposited on a carbon support. It is a key anode material for energy devices such as direct methanol fuel cells. The introduction of ruthenium effectively solves the problem of pure platinum being easily poisoned by carbon monoxide, significantly improving its anti-poisoning ability, catalytic activity, and stability.

The upstream segment primarily consists of precious metal raw materials (platinum and ruthenium) and support materials (high-surface-area activated carbon, carbon nanotubes, etc.). Since platinum and ruthenium are scarce strategic resources, upstream companies possess strong bargaining power, and price fluctuations directly determine the cost of the catalyst.

Global sales in 2025 are projected to be approximately 700 kilograms, with an average market price of approximately US\$41,000 per kilogram. The industry's gross profit margin is in the range of 30%–45%.
