According to our (Global Info Research) latest study, the global Pt500 Temperature Sensor market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The Pt500 temperature sensor is a temperature sensor based on platinum (Pt) material, which can measure and monitor the temperature change of the environment or objects. Pt500 represents the sensor's resistance value of 500 ohms (?) at 0 degrees Celsius. The Pt500 temperature sensor is based on the temperature characteristics of platinum resistance, and uses the linear relationship between platinum resistance and temperature for temperature measurement. According to the change of the resistance value of the platinum resistor, the value of the measured temperature can be deduced.
