Abstracts

The global Pt500 Temperature Sensor market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The Pt500 temperature sensor is a temperature sensor based on platinum (Pt) material, which can measure and monitor the temperature change of the environment or objects. Pt500 represents the sensor's resistance value of 500 ohms (?) at 0 degrees Celsius. The Pt500 temperature sensor is based on the temperature characteristics of platinum resistance, and uses the linear relationship between platinum resistance and temperature for temperature measurement. According to the change of the resistance value of the platinum resistor, the value of the measured temperature can be deduced.

This report studies the global Pt500 Temperature Sensor production, demand, key manufacturers, and key regions.
