The global PTA High Pressure Balloon Dilatation Catheter market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

The PTA high-pressure balloon dilatation catheter is a medical device used for percutaneous transluminal angioplasty (PTA) in the peripheral vasculature. It can effectively dilate vascular stenosis or blocked lesions and improve blood flow and tissue perfusion. The PTA high-pressure balloon dilatation catheter is characterized by high pressure resistance and low compliance of the balloon material, which can maintain a stable balloon diameter under high pressure and avoid the risk of over-expansion or balloon rupture. PTA high-pressure balloon-expandable catheter is suitable for the treatment of stenosis or obstruction of peripheral arteries such as iliac artery, femoral artery, popliteal artery, tibial artery, peroneal artery, renal artery, etc., as well as blocked lesions of autologous or artificial arteriovenous fistulas for dialysis.
