According to our (Global Info Research) latest study, the global PTC Heating Elements market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

PTC heaters are self limiting, which means that as they approach their design operating temperature, electrical consumption is automatically decreased. PTC heaters are incapable of overheating. A typical heating element is usually a coil, ribbon (straight or corrugated), or strip of wire that gives off heat much like a lamp filament. When an electric current flows through it, it glows red hot and converts the electrical energy passing through it into heat, which it radiates out in all directions.
