Abstracts

The global PTC Liquid Heater market size is expected to reach \$ 1036 million by 2032, rising at a market growth of 4.4% CAGR during the forecast period (2026-2032).

PTC Liquid Heater is an electrothermal conversion device based on positive temperature coefficient ceramic material, specially designed for heating requirements of liquid medium. The core principle is to use the resistance-temperature self-adjusting characteristics of PTC thermistor: at low temperature, the resistance is small, the current is large, and the temperature rises rapidly; when the temperature reaches the preset value, the resistance increases sharply, the current drops, and the automatic constant temperature is realized. These heaters achieve efficient and safe liquid heating through a hydro-electric separation structure and multi-layer heat conduction design.

This report studies the global PTC Liquid Heater production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for PTC Liquid Heater and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year.
