Polytetrafluoroethylene (PTFE) is a synthetic fluoropolymer and is commonly known as PTFE. It has numerous applications.

A capacitor is a passive electronic component capable of storing charge with a certain voltage level across two conducting plates, separated by a dielectric substance. PTFE capacitors are capacitors where PTFE or Polytetrafluoroethylene are used as a dielectric material.

PTFE capacitors have very low dielectric absorption, low dissipation factor, very high operating temperature of +170C, low-temperature drift, negligible moisture absorption, and have good stability.

Axial and radial PTFE capacitor are the two types of PTFE capacitors used in various applications such as consumer electronics, power and utilities, aerospace, telecommunication, and in the automotive sector.

According to our (Global Info Research) latest study, the global PTFE Capacitor market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.
