Abstracts

The global PTFE Clad Copper Plate market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

PTFE clad copper plate is a special composite material composed of polytetrafluoroethylene (PTFE) film and copper plate. PTFE is a high-performance plastic with excellent high temperature resistance, corrosion resistance and low friction coefficient, while the copper plate provides good electrical conductivity and mechanical strength. PTFE clad copper sheets are often used in the fields of electronics, communications and aerospace as the base material of high-frequency circuit boards. It has excellent dielectric properties and high temperature resistance, and can work stably in complex circuit environments. In addition, due to the low friction coefficient of PTFE, this composite material is also often used in applications where friction and wear need to be reduced, such as bearings and other components.
