According to our (Global Info Research) latest study, the global PTFE Coated Release Paper market size was valued at US\$ 1468 million in 2025 and is forecast to a readjusted size of US\$ 3786 million by 2032 with a CAGR of 14.5% during review period.

PTFE Coated Release Paper is a type of release paper coated with polytetrafluoroethylene (PTFE) that provides a non-stick, heat-resistant, and chemically inert surface. It is used to prevent adhesion of materials during processes such as laminating, molding, baking, or coating, ensuring easy separation without damaging the substrate. In 2025, global PTFE Coated Release Paper production reached approximately 57 K tons, with an average global market price of around US\$ 25,000 per ton. Annual production capacity is 60 K tons. Gross Profit Margin: 24.53%. The PTFE coated release paper industry chain spans from upstream raw materials such as PTFE resin, base paper, and silicone primers, to midstream processing which involves coating, calendaring, and curing, and finally downstream applications in laminating, molding, baking, and electronics insulation. Key players include manufacturers of PTFE resin, specialized coated fabrics, and release paper producers, while end-users are diverse, ranging from industrial, food processing, electronics, to high-temperature molding sectors. This structured supply chain ensures consistent quality and performance in high-demand industrial applications. PTFE coated release paper is a niche but strategically important product in industrial manufacturing. Its high-temperature resistance, chemical inertness, and non-stick properties make it indispensable in precision applications, especially in electronics, composites, and food processing. With growing demand for advanced materials and industrial automation, this product is likely to see stable growth, offering opportunities for manufacturers to

innovate in coating technologies and customized solutions.
