PTFE lined columns are industrial vertical structures that feature an inner lining of polytetrafluoroethylene (PTFE) to protect the column from corrosive chemicals and high temperatures during separation processes, such as distillation, absorption, or filtration. The PTFE lining provides a smooth, chemically inert surface that resists reactions with aggressive substances, making these columns ideal for use in industries like chemicals, pharmaceuticals, and petrochemicals. The combination of the column's structural strength and PTFE's non-reactive properties ensures the longevity and reliability of the equipment, allowing for efficient operation in harsh processing environments while minimizing the risk of contamination or equipment damage.
