PTFE lined dip pipes and spargers are specialized components used in industrial processes where resistance to corrosion and chemical attack is crucial. These pipes and spargers are coated with a layer of polytetrafluoroethylene (PTFE), a highly durable and chemically inert material, to protect the underlying metal from aggressive chemicals, high temperatures, and reactive substances. PTFE lined dip pipes are typically used to introduce or extract liquids from tanks or reactors, while PTFE lined spargers are used to introduce gases into liquids for processes like aeration or chemical reactions. Both components are commonly found in industries such as chemicals, pharmaceuticals, and food processing, where the prevention of contamination and equipment degradation is essential for ensuring safe and efficient operations.
