## Abstracts

The global PTFE Lined Pump market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A PTFE (polytetrafluoroethylene) lined pump is a type of pump that incorporates a lining made of PTFE, a synthetic polymer known for its excellent chemical resistance and nonstick properties. The lining helps protect the pump from corrosive or abrasive fluids, making it suitable for pumping a wide range of aggressive chemicals and substances. The PTFE lining acts as a barrier between the pumped fluid and the pump's internal components, preventing direct contact and potential damage. The lining provides superior chemical resistance, which is beneficial in applications where corrosive fluids are present, such as in the chemical processing industry.
