PTFE lined vessels are industrial containers that feature an inner lining made of polytetrafluoroethylene (PTFE), a highly chemical-resistant fluoropolymer. These linings protect the vessel's structural material—typically metal such as steel—from corrosive or reactive substances stored or processed inside. PTFE's non-reactive and non-stick properties make these vessels ideal for use in the chemical, pharmaceutical, and food industries, where they handle aggressive acids, bases, solvents, or high-purity materials. PTFE lined vessels offer durability, thermal stability, and low maintenance, ensuring safe and efficient operations in demanding environments.
