PU Curing Agent (Polyurethane Curing Agent) is a critical component in the formulation of polyurethane systems, facilitating the crosslinking process that transforms liquid prepolymers into solid, durable polymers. These agents, often comprising isocyanates or amine-based compounds, react with polyols or other active hydrogen-containing substances to form a three-dimensional network, imparting mechanical strength, chemical resistance, and thermal stability to the final product. PU curing agents are indispensable in various applications, including coatings, adhesives, sealants, elastomers, and foams, where tailored performance characteristics are essential.?
