Abstracts

The global PU Synthetic Leather market size is expected to reach \$ 22180 million by 2029, rising at a market growth of 7.9% CAGR during the forecast period (2023-2029).

The key manufacturers of PU Synthetic Leather include Anhui Anli, Topsun Microfiber, Covestro, Baiksan, Kuraray, Zhejiang Hexin, Fujian Tianshou, etc. The top five players account for about 13% of the market.

The Asia-Pacific region is the world's largest market, accounting for about 75% of the total global market share, and it is expected to continue to increase its market share in the future.

PU synthetic leather can be divided into Normal PU, Microfiber PU and Ecological Function PU. Among them, the Normal PU market account for the highest proportion, about 73%. The market for microfiber PU and Ecological Functional PU will gradually expand in the future.

In terms of application, it is mainly used in apparel&accessories, furnishing, automotive, sports goods and other downstream industries. Apparel&accessories aspect is the largest downstream industry, accounting for about 60%, and maintain a steady growth.

Synthetic Leather is a manmade fabric that looks like leather. It has leather like surface and is dyed and treated to make it have the look and feel of real leather. It is often used as a substitute for real leather because it is less expensive and it does not require using a real animal hide to create.

PU Synthetic Leather is more flexible and has a much higher tensile, tearing and

bursting strength. Furthermore, whereas PVC Synthetic Leather can only be used to make items with a low stress tolerance, PU Synthetic Leather can be used to make a wide variety of products which must be made from strong materials with a high stress tolerance such as boots, shoes bags, luggage, belts, gloves, and upholstery for furniture and car seats.
