Residential Building Shade Facilities

This report studies the Solar Shading Systems market, Solar Shading Systems is Shading against solar heat gain is the most readily applicable and flexible method of cooling and can be applied in all climate types in which the sun's influence is significant, and to almost all modern buildings irrespective of latitude. The key to good daylighting and thermal performance lies in the design of the building envelope. Shading devices can be an integral part of the envelope, and thus influence thermal and daylighting performance. They may be located at the external or internal face of the facade, or within double- and triple- glazed window or curtain wall systems. In each case solar radiation is prevented, wholly or partly, from entering the building. By intercepting solar radiation before it reaches the building, external devices are the most. They include motors to control the shades.

In China market, Hunter Douglas, Warema, Wintom, Garraf, Mingcheng, Yalite, Solion, Weiye and Jinxingyu are the leaders of Public Building Shade System, and top 10 manufacturers had about 25% combined market share.
