According to our (Global Info Research) latest study, the global Public Lighting market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Public Lighting is a raised source of light on the edge of a road or path. When urban electric power distribution became ubiquitous in developed countries in the 20th century, lights for urban streets followed, or sometimes led. Many lamps have light-sensitive photocells that activate automatically when light is or is not needed: dusk, dawn, or the onset of dark weather. This function in older lighting systems could have been performed with the aid of a solar dial. Many street light systems are being connected underground instead of wiring from one utility post to another.

The Global Info Research report includes an overview of the development of the Public Lighting industry chain, the market status of Cities (LED Lighting, Solar Lighting), Countrysides (LED Lighting, Solar Lighting), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Public Lighting.
