Public network trunking intercom is a technology that transmits voice signals through the data channel (IP) of mobile network signals to achieve intercom calls. It solves the problem of real-time intercom and error-free transmission of PTT signals, thereby solving the problem of short intercom distance due to the constraints of transmission power, antenna sensitivity, etc. of traditional intercom. Typical applications include cross-city and cross-provincial logistics fleets, wireless communications between branches of large enterprises, and unified wireless command and dispatch of large-scale public security and urban management. Public network intercom has revolutionized the radio signal coverage solution of traditional high-power relay stations.
