The global Public Safety Recording System market size is expected to reach \$ 530 million by 2032, rising at a market growth of 4.4% CAGR during the forecast period (2026-2032).

A Public Safety Recording System is a crucial technological infrastructure that plays a pivotal role in safeguarding communities. It encompasses a comprehensive set of tools and components designed to capture, store, and manage audio and video recordings related to public safety incidents. These systems are typically deployed in law enforcement vehicles, police stations, emergency call centers, and other key locations. For instance, in patrol cars, dash cams record traffic stops, pursuits, and other on-road encounters, providing an objective visual and auditory account that can be used for evidence in investigations, officer training, and to ensure transparency in police actions. In emergency call centers, recordings of 911 calls capture the distress calls of citizens, helping dispatchers make accurate decisions and also serving as a vital record for subsequent analysis. The stored recordings must adhere to strict legal and privacy requirements, ensuring that they are accessible only to authorized personnel and used appropriately to maintain public trust and enhance overall public safety.

In 2025, global Public Safety Recording System production reached approximately 41 K units, with an average global market price of around US\$ 9,300 per unit.

Public Safety Recording System is moving from traditional voice-only logging recorders to NG911-ready, IP-based multimedia recording platforms that can capture, store, replay, and manage voice, radio, text, video, GIS/location metadata, and CAD/event data in one evidentiary workflow; the main growth drivers are NG911 migration, cloud-hosted PSAP modernization, body-worn/video integration, AI-assisted

search/transcription/incident reconstruction, and stricter audit and retention requirements, while opportunities lie in replacement of legacy analog recorders, SaaS recording, multi-agency evidence sharing, and cybersecurity-compliant storage, but challenges remain in budget constraints, integration with old dispatch/radio systems, chain-of-custody requirements, data privacy, CJIS-style security compliance, and long-term storage cost. NG911 is specifically defined as an IP-based replacement for analog 911 infrastructure, and public-safety recording vendors are positioning products around multi-channel NG911 recording and archiving.

This report studies the global Public Safety Recording System production, demand, key manufacturers, and key regions.
