The global Pullu-lan Vegetable Capsule market size is expected to reach \$ 976.9 million by 2029, rising at a market growth of 10.0% CAGR during the forecast period (2023-2029).

The public's demand for plant capsules continues to expand, the safety hazards of animal capsules are gradually emerging, the continuous development of pullulan polysaccharide gel production technology, and the continuous regulation of the entire pharmaceutical industry are the key factors that promote the increase in revenue of the pullulan plant capsule market.

Pullu-lan Vegetable Capsule is made of pullulan polysaccharide fermented from corn as the main material. It is refined through a unique dipping process and drying technology. There is no risk of cross-linking reaction of amino acids in gelatin, and the drug release speed is relatively fast. It is relatively stable and has small individual differences. It is a safe raw material approved by FDA and is the first choice to replace gelatin capsules.
